Tools: Github • MySQL Workbench • Spring Tool Suite • VS Code • AWS • Github Pages

TECHNICAL PROJECTS

StockTrackr | Full Stack Software Engineer | <https://github.com/sahussain887/stockTrackr>
Inventory Management Web App || Built with Java, Spring and MySQL

- Pair programmed with Abrar Hussain, a Java application for inventory management aimed towards helping small businesses track inventory in real-time.
- Implemented Spring MVC for seamless CRUD operations on a SQL database.
- Ensured application is secure for users by validating inputs, preventing SQL injections.

PERSONAL PORTFOLIO | Full Stack Software Engineer | <https://www.jessicapetrey.com/>
Jessica's personal portfolio || Built with React, DaisyUI and Javascript

- Developed a responsive single-page website with React and DaisyUI to showcase my projects and skills.
- Utilized state and useEffect hooks to dynamically display data to the client.
- Implemented EmailJS to receive messages from contact form as emails, enabling viewers to contact me directly.

Swizzle | Full Stack Software Engineer | <https://github.com/JessPetrey/Swizzle>
Cocktail recipe finding web app || Built with Python, Flask and MySQL

- Developed a cocktail-centered web app with Python and Flask, enabling users to search through hundreds of recipes for cocktails and mocktails.
- Utilized TheCocktailDB API to retrieve and display recipe data

PROFESSIONAL EXPERIENCE

Barista | Bon Appetit @ Google | Seattle, WA

2018-2022

- Restructured flow of customer queues, resulting in shorter wait times.
- Guided team members; ensuring daily stocking and cleaning duties are completed and logged according to protocols.
- Contributed to the onboarding process by actively assisting in training and mentoring new team members.
- Collaborated with team members and management to improve efficiency, creative ways to serve the client, and implementing new recipes.

EDUCATION

Coding Dojo | Full-Stack Developer Certificate | Remote

April 2023

- Immersive Full-Stack Training Program in Python, Flask, Javascript, MongoDB, Mongoose, React, Node.js, Java, and Spring.
- Worked and collaborated 100% remotely, multiple full-stack CRUD applications built in 5 hours or less.
- Over 1000 hours spent building, testing, debugging and deploying applications
